

On the Subject of the Lion's Share

Or: the shallow end of the gene pool.

The hunting party has returned from a successful hunt.
Apportion the prey according to each lion's entitlement.

The number on the module is the current year. The following
timeline chart shows the age of each lion in the pride:

Visiting lions:

Askari
 Chumvi
 Malka
 Tojo
 Babu
 Boga
 Diku
 Kula
 Naanda
 Ndonga
 Rani
 Sabini
 Sheena
 Tama
 Tiifu
 Weena
 Zuri

Each lion's entitlement to prey is as follows:

- The King, if present, has 10 units of entitlement.
- Any adult siblings* of the King have 7 units.
- Other adults have 5 units.
- Any cub siblings of the King have 4 units.
- Other cubs have 3 units.
- Visiting lions who do not belong to the pride have only 1 unit.
- For each lit indicator on the bomb that contains the lion's name's first letter, add 4 units for the King, 3 units for their adult siblings*, 2 units for any other males and 1 unit for females.
- For each serial number letter contained in the lion's name, add 1 unit.
- Each unborn cub present adds 1 unit to their mother's entitlement, but has no entitlement of their own.
- Lions who are dead or absent have no entitlement.

* Siblings are lions with the same mother. Fatherhood is ignored.

Apportion the prey in such a way that each lion receives a percentage of prey according to their share of everyone's entitlement, rounded down. Allocate any left-over prey to the lead huntress, which is the one in red or all-caps.
