

## On the Subject of Rubik's Clock

*Time is a relative concept. But it can absolutely turn you crazy.*

It's possible to solve it like an actual [Rubik's Clock](https://www.google.com/search?q=solve+rubiks+clock).  
<https://www.google.com/search?q=solve+rubiks+clock>

Alternatively, repeat until all clocks, front and back, are set to 12 o'clock:

- Select an instruction in the table below based on which clock is lit (big square) and which pin is lit (small square).
- Select two modifications from the second table.  
**First time:** The first four characters of the serial number determine respectively; action of the 1<sup>st</sup> modification, amount of the 1<sup>st</sup> modification, action of the 2<sup>nd</sup> modification and amount of the 2<sup>nd</sup> modification.  
**After that:** Select the next row for both actions and amounts. If you are at the bottom, continue at the top.
- If you have 'Move' modification(s), apply them to select a different instruction. The instruction table is cyclic; if you get out of bounds, continue on the opposite side.
- In the instruction square, the top two arrows indicate which pins to change (pull or push, depending on their current state). The bottom arrow and number indicate which gear to rotate for how many hours. An overline means counterclockwise.
- If you have other modification(s), apply them to alter the instructions. 'Rotate' has priority over others. Now apply the modified instructions to the Clock.
- Now **turn the Clock over to the other side.**

## Instructions

 	 	 	 	 	 
 6	 6	 $\bar{2}$	 6	 1	 6
 $\bar{4}$	 1	 4	 3	 $\bar{4}$	 $\bar{3}$
 	 	 	 	 	 
 4	 1	 $\bar{1}$	 $\bar{5}$	 5	 $\bar{4}$
 	 	 	 	 	 
 5	 $\bar{3}$	 2	 3	 2	 $\bar{5}$
 	 	 	 	 	 
 4	 2	 $\bar{1}$	 $\bar{5}$	 $\bar{3}$	 6
 	 	 	 	 	 
 3	 5	 $\bar{2}$	 $\bar{2}$	 6	 $\bar{1}$

## Modifications

	Action	Amount (x)
A B C	Move x big squares to the right	Number of AA batteries + 1
D E F	Move x small squares down	Number of lit indicators + 1
G H I	Change other pins if x is even	Number of batteries + 1
J K L	Move x big squares up	Number of unlit indicators + 1
M N O	Move x small squares to the right	Number of D batteries + 1
P Q R	Rotate other way if x is odd	Number of indicators + 1
S T U	Move x big squares to the left	Number of AA batteries + 1
V W X	Move x small squares up	Number of lit indicators + 1
Y Z 0	Add x hours clockwise	Number of batteries + 1
1 2 3	Move x big squares down	Number of unlit indicators + 1
4 5 6	Move x small squares to the left	Number of D batteries + 1
7 8 9	Add x hours counterclockwise	Number of indicators + 1
