

On the Subject of the Lion's Share

Or: the shallow end of the gene pool.

The hunting party has returned from a successful hunt.
Apportion the prey according to each lion's entitlement.

The number on the module is the current year. The following timeline chart shows the age of each lion in the pride:

Visiting lions:

Askari
Chumvi
Malka
Tojo
Babu
Boga
Diku
Kula
Naanda
Ndona
Rani
Sabini
Sheena
Tama
Tiifu
Weena
Zuri

Each lion's entitlement to prey is as follows:

- The King, if present, has 10 units of entitlement.
- Any adult siblings* of the King have 7 units each.
- All other adults have 5 units each.
- Any cub siblings of the King have 4 units each.
- All other cubs have 3 units.
- Visiting lions who do not belong to the pride have only 1 unit.
- For each lit indicator on the bomb that contains the lion's name's first letter, add 4 units for the King, 3 for their adult siblings*, 2 units for any other males and 1 for females.
- For each serial number letter contained in the lion's name, add 1 unit.
- Each unborn cub adds 1 unit to their mother's entitlement.
- Lions who are dead or absent have no entitlement.

* Siblings are lions with the same mother. Fatherhood is ignored.

Apportion the prey in such a way that each lion receives a percentage of prey according to their share of everyone's entitlement, rounded down. If any prey is left over, allocate it to the lead huntress, which is the one in red.
