

On the Subject of X-Rays

I can see right through you.

- The module's green line scanner shows a single horizontal line at a time as it moves vertically over a symbol.
- The scanner scans three different symbols. These are scanned from top to bottom, from bottom to top, or alternating back and forth.
- The three symbols identify a row and a column in the big table below and a location in the small table above.
- Find the intersection of the relevant row and column in the big table below.
- Stay there or move to an adjacent symbol as indicated by the location of the third symbol in the small table above. The center of the table means stay.
- Push the button with the symbol you land on.
