# On the Subject of Cryptic Password

*Why do you need to encrypt your password? It's not PASSWORD, is it?*

- On this module, there are two words displayed: the starting word on the top and the key word on the bottom.
- For each letter of the starting word, find the encrypted letter using the cipher provided and the key word's letter at the corresponding index. The starting word's letter is used for the columns and the key word's letter is used for the row. If the key word is smaller than the starting word, wrap to the first letter and continue as necessary.
- Once you have all the correct encrypted word displayed, submit for completion.
