# On the Subject of Flashing Lights

Morse code doesn't have 12 dots. I've no idea what it says...

- Two LEDs will flash a sequence of 12 colours.
- Multiply the number of appearances of each colour by the number in the table below:

Colour	Blue	Green	Red	Purple	Orange
Top LED	4	2	3	6	1
Bottom LED	2	7	6	9	3

- For each sequence, find the sum of the numbers, modulo 5 and add 1.
- Submit the answers using the buttons, giving the answer for the top LED first.
- Entering an incorrect number will cause a strike and reset the sequences.
