# On the Subject of Curriculum

I want to major in anything that takes this combination of classes together.

- You have been lazy through your summer vacation, so taking classes quickly became a matter of life and death – literally.
- On the bomb there is a grid for your schedule, buttons for the five classes you have to take, and a SUBMIT button.
- Take the first five characters of the serial number into consideration for the next table. (If the character is a letter, simply convert it to its numeric value, A=1, B=2 etc.)

Classes you should take

Serial character in the same position is	Even	PHYSICS	PHILOSOPHY	PROGRAMMING	LINGUISTICS	LOGIC
	Odd	MATHS	LITERATURE	ECONOMY	MANAGEMENT	ELECTRONICS

- These classes are scattered randomly to the 5 buttons presented to you. As a hint, they are marked with their initials as you cycle.
- Now that you know which classes to take, you should decide which section of that class you should take.
- Each class has 3 different sections that is available, each of which has 2-3 lectures throughout the week. Each lecture is shown as a white cell on the grid.
- Whenever sections of two different classes try to have a lecture on the same slot, it will result in a conflict. These will show up on your schedule marked as red.
- By default, a proper schedule that you can submit should have zero conflicts.
- There are also conditions which may or may not affect your schedule:

Name	Condition	Effect
Band Practice	3 or more batteries present	Can't take lectures in the second halves of Monday and Wednesday
Sleepy Gary	No indicators on the bomb	Can't take lectures in the first slot of each day
Bookworm	No strikes taken	Allowed to have 1 conflict on the schedule

- There may be more than one correct schedule.
- When you decide you have taken the correct sections of the correct classes, press the SUBMIT button.
- Schedules with too many conflicts will result in a strike.
